Indexed in Current Contents

Subject Index

A

Acid phosphatases, separation 187–190
Ameloblasts 235–257
Amelogenesis 259–270
–, imperfecta 191–197
– –, ameloblasts 191–197
Analysis for macromolecules in bone 23–36
Annelids 231–238
Apatite, bone, paracrystalline nature 243–248
Aragonite tablets in bivalve shells 11–18
Aryl sulfatase 143–149

B

Bacterial collagenase 23–36
Biomineralization 199–200
Bone, acid phosphatases 187–190
– – –, separation 187–190
–, calcium effluxes 113–117
–, cells, effects of PTH on cyclic nucleotides 81–91
–, compositional changes in chronic renal failure 99–104
–, cyclic GMP in 73–79
– – –, visualization by an immunohistochemical technique 73–79
–, density in chronic renal failure 99–104
–, mechanical properties, relation to histologic structure 65–72
–, medullary 157–162
–, metabolism, estrogen effects 157–162
–, mineral, influence of crystal size on measurements of x-ray crystallinity 105–111
–, resorption, aryl sulfatase 143–149
Bovine dental enamel, immature 235–257
– – – –, protease inhibitors in 235–257
– – – –, protein complexes in 235–257
–, predentin, fatty acid profiles 127–133
– –, phospholipids in 127–133

C

Calcification, crystal growth in 45–47
Calcitonin, decrease of calcium efflux from bone fluid 201–208
–, effect on plasma concentrations of ^{45}Ca 201–208
Calcium diffusion in enamel 59–64
– – – –, temperature dependency 173–177
–, efflux from bone as affected by PTH 209–214
–, effluxes 113–117
–, in cement of annelids 231–238
–, in thyroid vesicles 275–278
–, -P_i-acidic phospholipid complexes in cartilage fractions 163–171
Calibration, ion probe 179–186
Calvaria, measurements of two-way calcium transport 113–117
Carious enamel, luminescence 243–248
Cementum, enamel matrix proteins in 223–229
–, fine structure 239–242
Chondroitin sulphate in bone 23–36
Crystal size, influence on x-ray diffraction 105–111
Crystals in amelogenesis imperfecta 191–197
Cytochalasin B 1–10
Cytochrome C oxidase in matrix vesicles 37–49

D

Degradation of proteins in vivo in developing enamel 235–257
Dental caries, dissolution of enamel crystals in 19–27
Dental enamel 59–64
– –, diffusion of ^{45}Ca in 59–64; 173–177
Dental pulp 127–133
Dentin, incisor, deposition of lead in 41–46
Detoxification by biomineralization 199–200
Diphosphonate 151–156

E

Electron microprobe, applied to osteodentin 215–222
– –, in study of cement of annelids 231–238
Enamel crystals 19–27
– –, crystal axes, effects of dental caries 19–27
– –, dissolution in dental caries 19–27
–, early mineralization 271–274
– – –, localization of calcium in 271–274
–, lipid and proteins 119–125
–, matrix proteins, on root-analogue surfaces 223–229
–, maturation, proteins in 259–270
–, point analysis for fluoride 179–186
–, proteins, amino acid composition 259–270; 173–177
–, proteins, EDTA solubilities 259–270
–, sound and carious, luminescence 243–248
Enamel-cementum morphology 223–229
Endosteal lining cells, effect of cytochalasin B on 1–10
Estrogen, effects on bone formation 157–162
Exchange of calcium by enamel 59–64

F

Femur, fracture, relation to microstructure 65–72
–, tensile impact and dynamic properties 65–72
Fluid spaces, measurements 151–156
– –, of bone, as affected by rickets 151–156
Fluoride, determination by ion probe 179–186
–, effects on staining of enamel matrix 119–125

G

Guanosine 3′,5′-monophosphate, cellular localization and concentration 81–91
– – – –, in bone 73–79
Glycosaminoglycan, hydrolysis 143–149

H

Heavy metal ions 199–200
Hydroxyapatite, Ca/P ratio in 45–47
–, kinetics of precipitation 45–47
–, precipitation from dilute solutions 45–47
Hypercalcemia, induced by lead acetate 41–46
Hyperphosphatemia, induced by lead acetate 41–46
Hypoplasia, enamel 191–197

I

Immuno-histochemical technique, for cyclic GMP in bone 73–79
Inorganic ions in cartilage fractions 163–171
–, pyrophosphatase 187–190

Intracellular granules, ions in 199–200
Inulin-^{14}C, measurement of extracellur space in bones 151–156
Ion pumps in bone 113–117

J
Japanese quail 157–162

K
Kinetics of hydroxyapatite precipation 45–47

L
Lead acetate, effects on calcium and phosphate levels in serum 41–46
–, deposition of lead from in sites of calcification 41–46
–, displacement of Ca and phosphate of bone mineral by 41–46
Lipophilic protein, staining by Sudan Black 119–125
Luminescence 243–248

M
Macrophages, NAGase activity in 135–141
–, role in bone remodeling 135–141
Magnesium, effects of concentration on responsiveness to PTH 93–98
–, effects on bone mineral metabolism in vitro 93–98
–, effects on bone mass in tissue culture 93–98
Matrix vesicles, absence of 37–39
– –, membranes 163–172
– – –, lysis of 163–172
– –, phospholipids in 163–171
Membrane, bone 113–117
Microradiographs, cellular cementum 239–242
Mitochondrial respiratory enzymes 37–39

N
Nacreous layer in bivalve shells 11–18
NAD isocitric dehydrogenase in matrix vesicles 37–39
Nucleation by aragonite tablets in bivalve shells 11–18

O
Odontoblasts 127–133
–, separation from pulp 127–133
Osteoblasts, effects of cytochalasin B 1–10
–, subplasmalemmal microfilaments 1–10
Osteoclasts, aryl sulfatase 143–149
Osteodentin, apatite clusters in 215–222
–, microanalysis 215–222
–, ultrastructure 215–222
Osteogenesis 157–162

P
Paracrystalline bone apatite, associations of hydroxyl 243–248
Parathyroid administration, acute, effects on bone cyclic nucleotides 81–91
–, hormone, effects, influence of Mg in tissue culture 93–98
– –, effect on calcium effux from bone 209–214
– – – –, plasma concentrations of ^{45}Ca 209–214
–, hyperplasia, in chronic renal failure 99–104
Periodontal cells, cyclic nucleotides in 81–91
Peridontal ligament 135–141; 143–149
– –, N-acetyl-glucosaminidase in 135–141
Phospholipids in matrix vesicles 163–171
– –, predentin 127–133
Point analysis for fluoride 179–186
Potassium pyroantimonate, use in localization of calcium in immature enamel 271–274

R
Rates of removal of ^{45}Ca from plasma 201–208; 209–214
Renal osteodystrophy 99–104
– –, produced by irradiation 99–104
Rickets, induced by diphosphonate 151–156

S
Secondary osteons, area, relation to energy absorption 65–72
Sialoprotein in bone 23–36
Solubilization of bone matrix 23–36

T
Technetium labelled red cells, use in measurement of red cell moss in bones 151–156
Thyroid vesicles, calcium in the colloid of 275–278

U
Ussing chamber, micro 113–117

V
Vitamin D deficiency 151–156

W
Water, tritium labelled, use in measurement of bone water 151–156

X
X-ray diffraction, bone 243–248
